

What is Networking?

Task 1 – TryHackMe

1. Room Overview

TryHackMe Room

Room: What is Networking?

Room link: <https://tryhackme.com/room/whatisnetworking>

2. Step-by-Step Account of What I Did

Step 1 – Study the basic meaning of networking

I opened the “What is Networking?” task and studied the explanation of networks as connected devices or systems. The room used everyday examples such as transportation, electricity infrastructure and postal systems to introduce the idea.

Step 2 – Understand the Internet

I continued to the Internet section and learned that the Internet is made up of many smaller networks joined together. I also reviewed the distinction between private and public networks and answered the question about the inventor of the World Wide Web.

Step 3 – Identify devices on a network

I worked through the section on identifying devices. I learned about IP addresses, MAC addresses and IPv4 structure. I verified that “IP” means Internet Protocol, each IPv4 section is an octet, IPv4 has four sections, and “MAC” means Media Access Control. I also completed the interactive activity and verified the displayed flag.

Step 4 – Complete the Ping (ICMP) activity

I studied how ping uses ICMP to test communication between devices and reviewed the example command and response times. I then answered the required questions, including the ping syntax, and completed the practical activity to obtain the displayed flag.

Step 5 – Complete the continuation activity and verify the room

I reached the “Continue Your Learning: Intro to LAN” section and verified the completion indicators shown in the supplied evidence. The final supplied screenshots show the room at completion status.

3. Screenshot Evidence – In the Exact Order Supplied

The seven screenshots below are inserted as complete images, without cropping away the surrounding TryHackMe interface. They appear in exactly the order in which they were supplied for this revision.

SCREENSHOT 1

Screenshot 1 – What is Networking? • Task 1 introduction and networking concept.

SCREENSHOT 2

Screenshot 2 – Task 1 progress • Correct answer and subsequent room tasks.

SCREENSHOT 3

Screenshot 3 – Task 2 / Internet section • Correct answer shown in the room.

SCREENSHOT 4

Screenshot 4 – Task 3 / Identifying Devices on a Network • Correct answers and practical flag.

Task 4 ✓ Ping (ICMP)

Ping is one of the most fundamental network tools available to us. Ping uses **ICMP** (Internet Control Message Protocol) packets to determine the performance of a connection between devices, for example, if the connection exists or is reliable.

The time taken for ICMP packets travelling between devices is measured by ping, such as in the screenshot below. This measuring is done using ICMP's echo packet and then ICMP's echo reply from the target device.

Pings can be performed against devices on a network, such as your home network or resources like websites. This tool can be easily used and comes installed on Operating Systems (OSs) such as Linux and Windows. The syntax to do a simple ping is `ping IP address or website URL`. Let's see this in action in the screenshot below.

```
cmnatic@CMNatic-THM-LPTOP:~$ ping 192.168.1.254
PING 192.168.1.254 (192.168.1.254) 56(84) bytes of data:
64 bytes from 192.168.1.254: icmp_seq=1 ttl=63 time=2.18 ms
64 bytes from 192.168.1.254: icmp_seq=2 ttl=63 time=2.53 ms
64 bytes from 192.168.1.254: icmp_seq=3 ttl=63 time=2.15 ms
64 bytes from 192.168.1.254: icmp_seq=4 ttl=63 time=3.34 ms
64 bytes from 192.168.1.254: icmp_seq=5 ttl=63 time=10.3 ms
64 bytes from 192.168.1.254: icmp_seq=6 ttl=63 time=4.45 ms
^C
--- 192.168.1.254 ping statistics ---
6 packets transmitted, 6 received, 0% packet loss, time 5008ms
rtt min/avg/max/mdev = 2.152/4.160/10.313/2.864 ms
cmnatic@CMNatic-THM-LPTOP:~$
```

Here we are pinging a device that has the private address of `192.168.1.254`. Ping informs us that we have sent six ICMP packets, all of which were received with an average time of 4.16 milliseconds.

Now you are going to do the same thing to ping the address of "`8.8.8.8`" on the deployable website in this task. Pinging the correct address will reveal a flag to answer the following question below.

Answer the questions below

What protocol does ping use?

ICMP ✓ Correct Answer

What is the syntax to ping 10.10.10.10?

ping 10.10.10.10 ✓ Correct Answer

What flag do you get when you ping 8.8.8.8?

Screenshot 5 – Task 4 / Ping (ICMP) • Explanation, example and question section.

4. What I Learned

Networking fundamentals

A computer network connects devices so they can communicate and exchange information. Networking is a foundation for cybersecurity because understanding communication between devices is necessary for understanding network security.

The Internet

The Internet can be understood as many interconnected networks. I learned the difference between a private network and a public network and understood that the World Wide Web is associated with Tim Berners-Lee.

IP and MAC addresses

IP addresses are used for network communication, while MAC addresses are associated with network interfaces. I learned that an IPv4 address has four sections, and each section is called an octet.

ICMP and ping

Ping uses ICMP (Internet Control Message Protocol). It can be used to check whether a destination responds and to observe response time, which is useful when troubleshooting connectivity.

Practical cybersecurity learning

The interactive tasks connected the explanations with practical exercises. The correct-answer indicators and flags provided evidence that the activities were completed successfully.

5. Key Answers Verified During the Room

Question / Concept	Answer Verified
Who invented the World Wide Web?	Tim Berners-Lee
What does “IP” stand for?	Internet Protocol
What is each section of an IPv4 address called?	Octet
How many sections does an IPv4 address have?	4
What does “MAC” stand for?	Media Access Control
What protocol does ping use?	ICMP
What is the ping syntax for 10.10.10.10?	ping 10.10.10.10

6. Second Required Room – Intro to Networking

Required by the Task 1 instructions: The final submission must cover both “What is Networking?” and “Intro to Networking”.

The screenshots supplied for this revision are evidence for the “What is Networking?” room only. To keep the submission truthful, no screenshots or completion claims for “Intro to Networking” have been invented here. When those screenshots are available, this section should contain its own step-by-step account, separate “What I Learned” section, and at least four ordered screenshots including completion evidence.

Room: Intro to Networking

Status: *Screenshots/evidence not supplied in this revision.*

8. Final Submission Checklist

- One Word document (.docx) only for Task 1.
- What is Networking? walkthrough included.
- Step-by-step account kept separate from What I Learned.
- At least four screenshots per room are required; seven screenshots are included here for the supplied room.
- Screenshots are presented in the exact order supplied.
- Final completion evidence is included in the supplied screenshots.
- The second required room, Intro to Networking, must be added with its own walkthrough and screenshot evidence before final submission.

9. Brief Summary

I completed the “What is Networking?” TryHackMe learning room and worked through its networking fundamentals, Internet concepts, device identification using IP and MAC addresses, IPv4 structure, and ping/ICMP practical activity. The ordered screenshots provide visual evidence of the work and the correct-answer/completion indicators shown by TryHackMe.
